Presented By Shivendra Gupta

ONPAGE SEO CHECK

TITLE TAG

Syntax - <title> 50-60 character </title>

Analysis – Title Tag is optimized

Importance - The title tag helps search engines understand your page and shows users what your page is about. It improves visibility, boosts rankings, and increases clicks on search results.

```
<title>Shivendra Collection &amp;amp; Boot House</title>
```

META DESCRIPTION

Syntax - <meta name="description" content="Write your page summary here in 150–160 characters with your main keyword.">

Analysis – META Description is optimized

Importance - The meta description is important because it quickly tells users what your page is about and encourages them to click. It improves visibility, boosts CTR, and helps attract the right audience.

```
<meta name="description" content="Shivendra Collection offers stylish clothes and quality shoes at affordable prices. Shop trendy fashion for men and women with great
```

META KEYWORDS

Syntax - <meta name="keywords" content="keyword1, keyword2, keyword3">

Analysis - Meta keywords is not optimized

Importance - Meta keywords are not used by Google anymore for ranking, but some small search engines still read them. They can help with minor SEO organization but are not very important today.

How to fix –

- Ensure every page has a unique, compelling Title Tag (under 60 characters) that includes the page's primary keyword, as this is a major ranking factor.
- Write a persuasive, unique summary (around 150-160 characters) for each page to boost your Click-Through Rate (CTR) in search results.
- Use a single <h1> tag for the main topic and logically organize the rest of your content using relevant <h2> and <h3> tags to improve readability and contextual SEO.

Heading Tag

H1

Syntax - <h1>Your main page heading here</h1>

Analysis – H1 is optimized

Importance - The H1 tag tells search engines and users what the main topic of the page is. It improves SEO, helps Google understand page structure, and makes your content clearer and more readable.

```
<h1 class="wp-block-site-title"><a href="https://shivendracollectionboothouse.wordpress.com" target="_self" rel="home" aria-current="page">Shivendra Collection &amp;amp; Boot House</a></h1>
```

H2

Syntax - <h2>Your section heading</h2>

Analysis – H2 is optimized

Importance - H2 tags divide your content into main sections and help search engines understand the structure and flow of your page.

```
<h2 style="line-height:1.2;" class="wp-block-post-title"><a href="https://shivendracollectionboothouse.wordpress.com/2025/11/03/shop-latest-styles-at-shivendra
```

H3

Syntax - <h3>Your sub-section heading</h3>

Analysis – H3 is optimized

Importance - H3 tags break down each H2 section into smaller parts, making content easier to read and improving SEO clarity.

```
<h3 class="wp-block-heading has-text-align-center"><strong>₹ Pricing</strong> ₹</h3>
```

H4

Syntax - <h4>Your smaller sub-heading</h4>

Analysis – H4 is optimized

Importance - H4 tags give deeper structure inside H3 sections, helping users and search engines follow complex topics smoothly.

```
<h4 class="wp-block-heading has-text-align-center"><strong>🕺 Tell your style story</strong></h4>
```

Dupilcate Check

we use site https://www.duplichecker.com/

Analysis – Content is optimized

Importance - Avoiding duplicate content helps your website rank better, prevents SEO issues, and gives users clear, unique information.

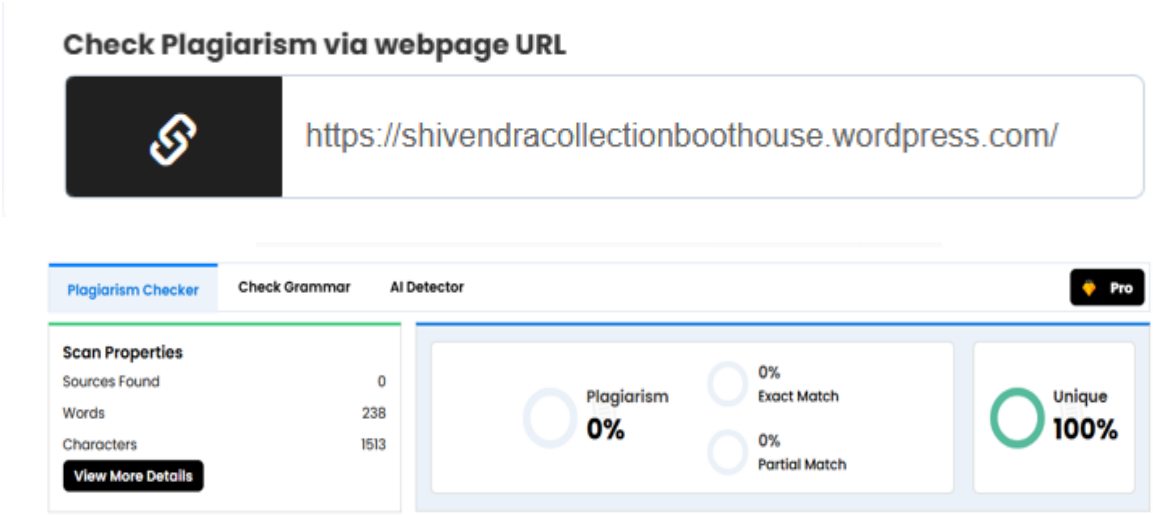

IMAGE AND ALT TAG OPTIMIZATION

Syntax - <img src="image.jpg" alt="Short and clear description of the image">

Analysis -Alt Text is optimized

Importance - Alt text helps Google understand your image, improves SEO, and makes your website accessible for users who can't view images.

```
<img src="https://pixel.wp.com/b.gif?v=noscript" alt="Men's shirt and pant outfit" style="height:1px;width:1px;overflow:hidden;position:absolute;bottom:1px;"/>
```

OG TAG OPTIMIZATION

Syntax - <meta property="og:title" content="Your Page Title">

<meta property="og:description" content="Short page description">

Analysis - OG tag is optimized

Importance - OG tags make your website look attractive when shared on social media platforms.
They show a clear preview with title, description, and image, increasing clicks.
Good OG tags improve branding, engagement, and traffic from social media.

```

Backlinks

Analysis - No Backlinks Found

Importance - Backlinks help improve your site's authority and trust in Google's eyes. They boost your search ranking and bring more organic visitors. Strong backlinks make your website more visible.

Suggestion –

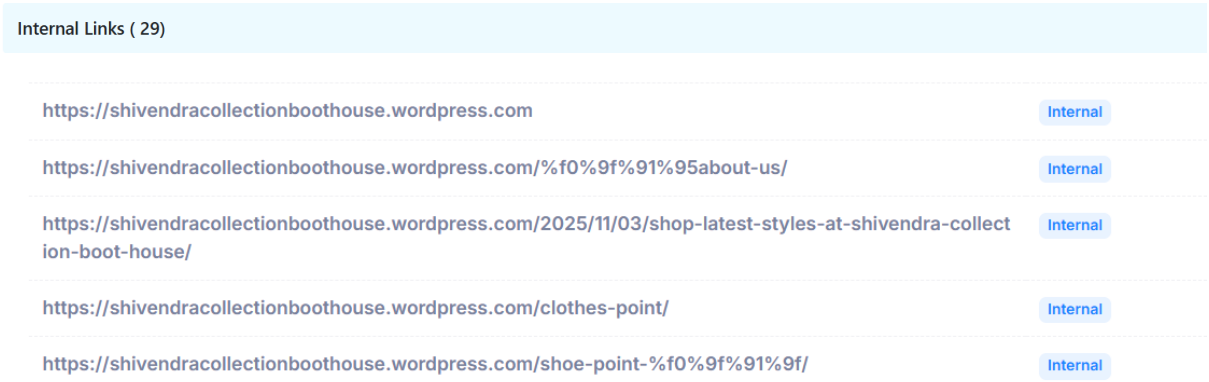

- Focus on getting links from high-quality and relevant websites.
- Use guest posting, broken-link building, and share valuable content that others naturally want to link.
- Avoid spammy or paid low-quality backlinks.in

Internal links

Analysis - Internal link is found

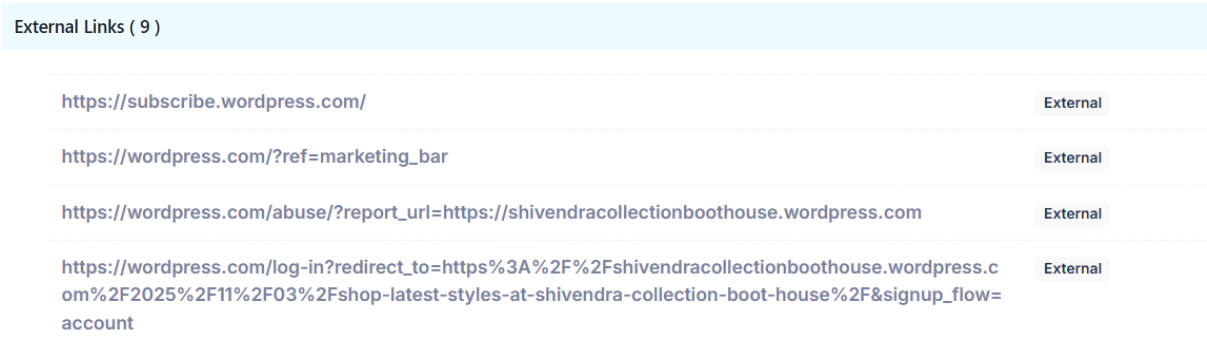

Importance - Internal links help users move easily through your website and allow Google to understand your site structure. They improve SEO, increase page views, and keep visitors on your site longer.

External Links

Analysis - External link is found

Importance - External links increase your content's trust by connecting to reputable websites. They show Google that your information is backed by reliable sources and help improve your search credibility.

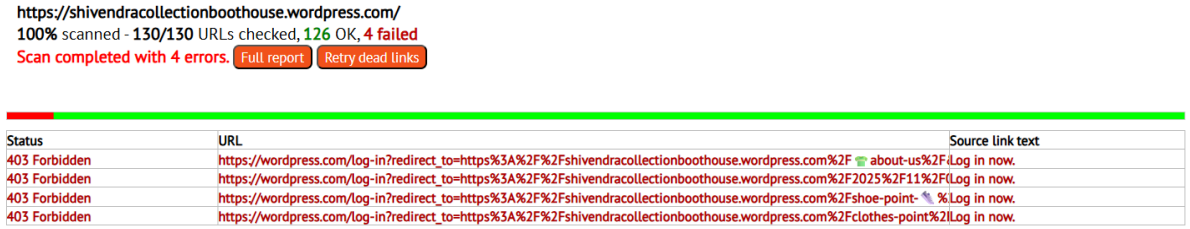

Broken links

Analysis - Broken Links is found

Importance - Fixing broken links is important because they harm user experience, reduce trust, and negatively impact SEO. Search engines see broken links as poor website quality, which can lower your rankings.

How to improve -

- Check your site using tools like Google Search Console or a broken link checker.
- Replace the broken URL with a correct, working link.
- If the page is deleted, use a **redirection** to a relevant page.
- Remove the link completely if it's no longer needed.
- Review and scan your website regularly to prevent future broken links.

Check

Spam Score

Analysis - Spam Score not optimized, 0% to 10% is Best / Safe

Importance - Spam score shows how risky or low-quality your website looks to search engines. A high spam score can lower rankings and reduce trust in your site.

How to improve -

- Remove spammy or low-quality backlinks.
- Disavow harmful links in Google Search Console.
- Avoid over-optimized (keyword-stuffed) anchor text.
- Build high-quality, relevant backlinks.
- Fix duplicate content and improve content quality.

Sr. No	Web Page	Spam Score
# 1	https://shivendracollectionboothouse.wordpress.com/	-1%

Domain Authority - 1

Analysis - DA is not Optimized, DA is 1, 60+ is for Top sites

Importance - DA shows the overall strength and trust of your entire website. Higher DA helps your site rank better on Google and increases overall visibility.

How to improve -

- Get high-quality backlinks from authoritative websites.
- Polish your overall site SEO (robots.txt, sitemap.xml, canonical tags).
- Remove spammy or low-quality backlinks.
- Improve domain trust with About, Contact, Privacy Policy pages.
- Keep publishing fresh, high-quality, relevant content.

Page Authority - 1

Analysis - PA is not optimized, PA is 1, 50+ is for Strong page

Importance - PA measures how strong and rank able a specific page is. Higher PA means your individual pages can rank higher in search results.

How to improve -

- Build backlinks specifically to that page.

- Strengthen internal linking so more pages point to it.
- Improve page speed and mobile performance.
- Optimize on-page SEO (H1, meta title, description, alt text).
- Update the page content regularly for freshness.

No follow links

Analysis - Links are found

Importance - No-follow links don’t pass SEO value, but they protect your site from spam and keep your backlink profile natural.

Suggestion - Use no-follow for paid links, comments, ads, or untrusted websites. Add them when you don’t want to pass authority or take any SEO risk.

TECHNICAL SEO CHECKER

URL -https://shivendracollectionboothouse.wordpress.com/

META ROBOT OPTIMIZATION

Syntax - <meta name="robots" content="index, follow">

Analysis – Meta robot is optimized

Importance - The Meta Robots tag is important because it controls how search engines crawl and index your website pages. It helps you decide whether a page should appear in Google search results and whether the links on that page should be followed. By using it correctly, you can prevent duplicate, private, or low-value pages from being indexed, improving overall SEO and maintaining a clean, search-friendly website structure.

```
<meta name='robots' content='max-image-preview:large' />
```

Robot.txt

URL - https://shivendracollectionboothouse.wordpress.com/robots.txt

Analysis - Robot.txt is optimized

Importance - Robots.txt guides search engine crawlers on which pages to access or avoid. It helps protect non-essential or sensitive pages and improves crawl efficiency. A well-configured robots.txt ensures search engines focus on your most important content.

Sitemap.xml

URL - https://shivendracollectionboothouse.wordpress.com/sitemap.xml

Analysis – Sitemap.xml is optimized

Importance - Sitemap.xml provides a structured list of all important pages on your website. It helps search engines discover, crawl, and index your content faster—especially useful for new websites or pages with low internal links.

Canonical Tag

Analysis – Canonical tag is optimized

Importance - Canonical tags prevent duplicate content problems by telling search engines which page is the original version. This protects your ranking power, avoids content duplication penalties, and ensures the correct page appears in search results.

WEB SPEED OPTIMIZATION

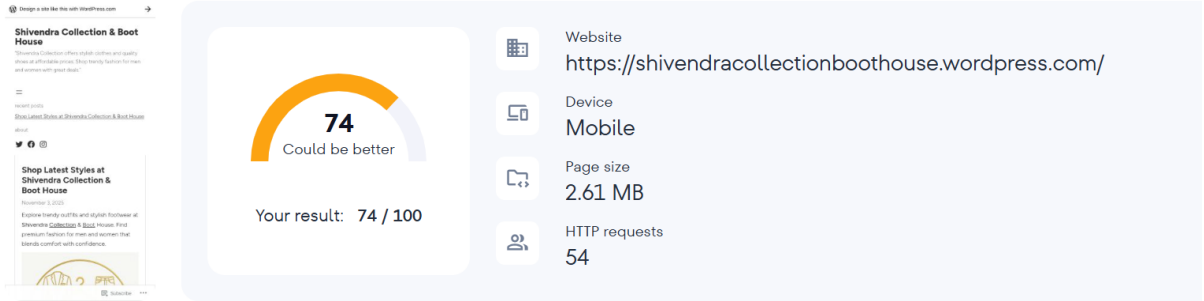

Mobile speed

Speed – 74%

Analysis – Mobile speed is optimized

Importance - Mobile speed is crucial because most users browse on phones. Slow mobile pages increase bounce rates and hurt mobile search ranking.

Suggestion - Use compressed images, lightweight design, and reduce pop-ups. Test with Google Page Speed Insights and fix mobile-specific issues.

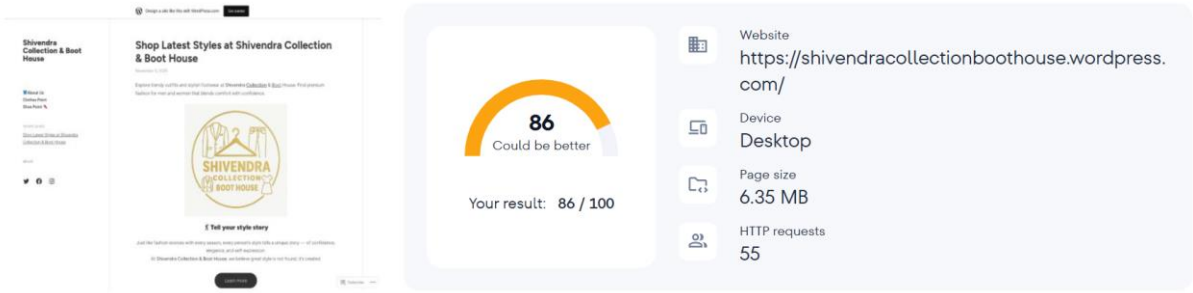

Desktop speed

Speed – 86%

Analysis – Desktop speed is optimized

Importance - Fast desktop speed improves user experience and boosts rankings. Slow desktop performance reduces engagement and lowers conversions.

Suggestion - Optimize images, reduce large scripts, and enable browser caching. Use speed tools to find and fix heavy desktop elements.

Core Web Vitals

Analysis – Core web vitals is optimized

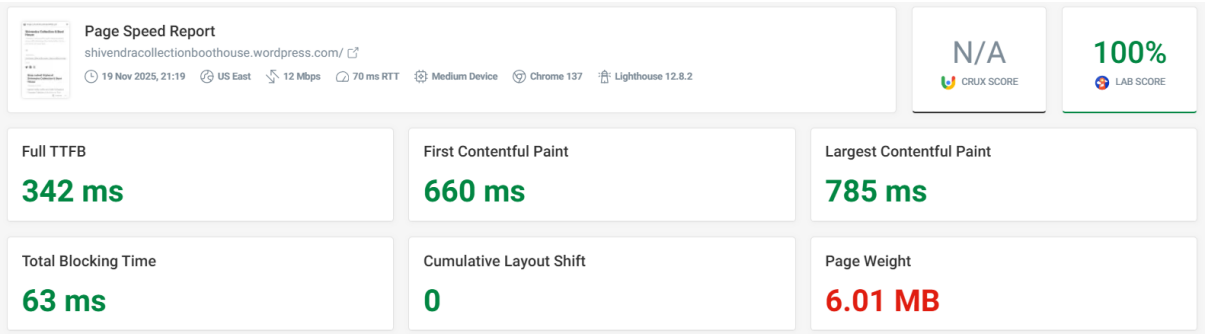

Importance - Core Web Vitals measure page loading, interactivity, and visual stability. Good scores improve user experience and boost your Google rankings.

Suggestion - Improve LCP by optimizing images, fix FID by reducing heavy scripts, and fix CLS by setting fixed image sizes. Regularly test your site with Page Speed Insights.

LCP (Largest Contentful Paint) - 785ms – 0.785sec, 2.5sec is good for website

FCP (First Contentful Paint) - 660ms – 0.66sec, 1.5sec is good for website

CLS (Cumulative Layout Shift) - 0

HEADER TAG

Syntax - <header>

<nav>

Home

</nav>

</header>

Analysis – Header tag is optimized

Importance - The header is important because it gives users quick access to the main navigation and helps them understand what the page is about. It improves user experience, boosts engagement, and helps search engines understand your website structure better.

JAVASCRIPT OPTIMIZATION

Syntax - <script src="script.js"></script>

Analysis – Javascript is optimized

Importance - JavaScript is important because it adds interactivity, dynamic features, animations, sliders, and user actions to your website. It makes the site more functional and improves user engagement.

CSS OPTIMIZATION

Syntax - <link rel="stylesheet" href="style.css">

Analysis - CSS is optimized

Importance - CSS is important because it controls your website’s design, colors, fonts, spacing, and layout. It improves user experience and makes your website visually attractive and easy to use.
